

SADDLE RIDGE SPRING CLEAN UP
APRIL 23rd 9:00 AM
Meet at the gate.

DID YOU KNOW?

**The monarch butterfly population in North America has decreased by over 90%
in just the last 20 years.**

One of the biggest factors in monarch decline is the increasing scarcity of milkweed.

**Milkweed is the ONLY caterpillar host plant on which they feed and lay their eggs.
Without milkweed the species declines.**

Milkweed grows along many of the roads in Saddle Ridge.

Butterflies taste with their feet.
